

Infrastructure

Leverage the power of public cloud

A staged approach for simple integration

Over the past decade cloud computing has evolved to become an urgent priority for any competitive business.

As well as preserving capital through a subscription model, cloud can help you significantly reduce management complexity, access the latest productivity tools, and enhance collaboration between your team members and business partners.

With in-built scalability, cloud also provides on-demand capacity for increased storage and data processing, allowing you to leverage innovative strategies such as advanced analytics and machine learning.

Ideal opportunities to incorporate cloud

Hardware refresh

Save on acquisition costs by migrating selected workloads to public cloud resources.

Mergers and acquisitions

Scale up for growth, enhance integration and share real time information with new users.

Updating application

Have the latest versions of leading applications through affordable monthly subscriptions.

Disaster recovery and backup

Boost your capacity and increase your security with offsite data storage.

Four steps to cloud transformation

There's no need to replace your entire IT solution as you can integrate new capabilities through a hybrid approach, one step at a time. And as you become more comfortable, and more skilled, you can migrate additional applications, operating systems, platforms or your entire infrastructure. But how do you get started? And what's the best approach to take?

Through our vast experience with all cloud models, experteq can help you plan your journey and transform your capabilities.

1

Assessment

The first step is to plan where your applications should run in a cloud environment, and how your staff members will access these. Using discovery tools, we'll help you compile an inventory of applications with performance data and metadata.

2

Migration

We'll help you map your servers per application, understand how they communicate with each other, and then identify any dependencies. Assessment tools will help to evaluate the best way to migrate each on premise application to the cloud.

3

Optimisation

Through proactive optimisation tools, we'll identify potential bottlenecks and new ways to improve your application performance, analyse user behaviour and fine tune the best experience for your team and your customers.

4

Management

Through cloud native management tools, we'll help you maximise the performance and availability of your Hybrid Cloud resource and applications, and pro-actively identify potential issues.

Enhanced security, complete visibility and simple deployment

By employing the latest tools and most qualified security experts, today's top-tier cloud providers offer far greater data protection than most companies could ever achieve in-house.

In addition, through experteq's extensive expertise in the heavily regulated Financial Services Industry, experteq adds a further layer of security by automating and orchestrating ongoing monitoring activity, and helping you make sure your solution is successfully configured.

Our services support international service standards, such as NIST and ISO 27000, and because we are PCI compliant and fully aligned with APRA guidelines, we help you to meet all regulatory requirements including CPS 234.

Full stack visibility

With a modern cloud solution, you'll have a full view of all your applications, infrastructure and network with advanced analytics, dashboards and visualisation maps.

Intelligent insights

You'll be able to analyse, correlate and monitor data from various sources with powerful query language and built-in machine learning constructs.

Simple integration

experteq will show you how to achieve out-of-the-box integration with popular DevOps, issue management, ITSM and SIEM tools.

Ongoing device and user management solutions

As well as managing your cloud solution, experteq can take care of your PCs and mobile devices.

Through a simple web-based console, we'll help your team access applications, data and resources on any device and from any location.

Some of the ways that we help:

- ✓ Broad application compatibility
- ✓ Fast and seamless implementation
- ✓ Minimal upfront investment
- ✓ Rapid ROI through cost savings
- ✓ Infinite scalability and reliability
