

Network

We've integrated experteq expertise into SD-WAN technology

Accelerate application performance and contain network costs

experteq SD-WAN is an enterprise connectivity networking solution designed for today's data-driven business environment.

Built on leading SD-WAN technology, it provides an alternative to expensive and rigid MPLS connectivity by using cost-effective and flexible internet connections.

It's by far the fastest and most efficient way to create a modern Wide Area Network or complement a legacy solution through a hybrid approach.

Fast and reliable

experteq SD-WAN appliances automatically determine the fastest route across a network to dramatically enhance applications performance. Availability is enhanced by implementing various resilience options such as:

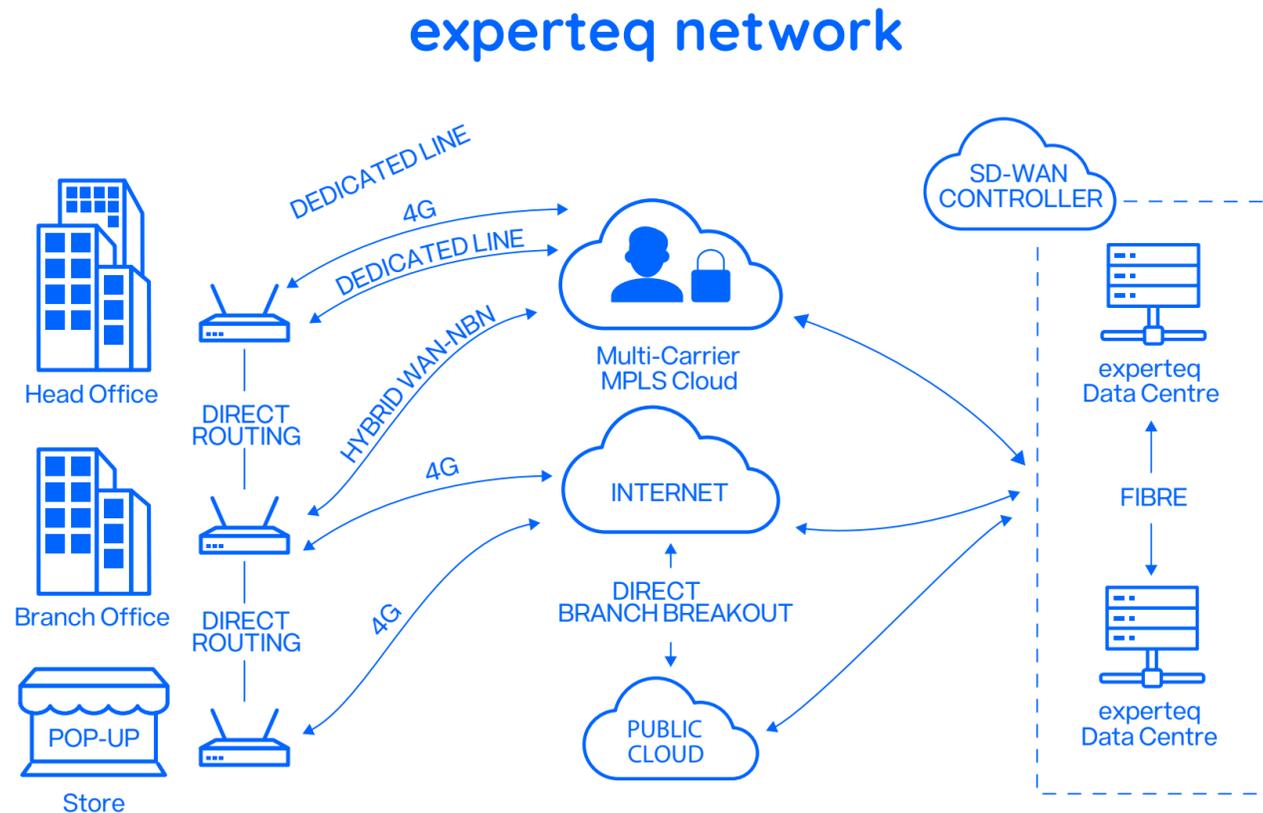

- ✓ Additional links e.g. 4G
- ✓ High availability with addition of redundant device, eliminating single point of failure
- ✓ Global device management through a central, software defined interface ensures network and hardware visibility and control

Rapid deployment

experteq SD-WAN is delivered smoothly and rapidly to multiple sites, such as head offices, branches, remote offices and pop-up stores. As a software-defined solution it reduces the complexity of device installations and it speeds up deployment through zero touch provisioning.

A banking-grade solution for all industry sectors

experteq SD-WAN was initially developed to support the stringent demands of the Financial Services Industry. It delivers significant advantages over standard solutions and is now available to all business sectors.

Management

Take advantage of our network consulting and day-to-day operational services that ensures that experteq SD-WAN achieves its full potential.

Multiple providers

Because the experteq SD-WAN platform is carrier agnostic, multiple providers including Telstra, Optus and AAPT can be used. It even allows you to use any existing links you may have with your current WAN provider.

Enhanced security

With experteq SD-WAN you receive a high level of data protection utilising device authentication, multi-point security and encryption keys. Adding to this are integrated security protocols, network segmentation and individual encryption schemes.

Enterprise capabilities

By combining Cisco technology with experteq networking and cloud experience, experteq SD-WAN can be configured to suit your specific requirements with scale to connect thousands of end points and routes across widely dispersed

Get connected

With simple connectivity to data centres, cloud and SaaS providers, experteq SD-WAN can play a central role in future-proofing your infrastructure and transforming your business capabilities.

Talk to an experteq consultant about accelerating your performance and containing your costs.

Talk to us today about your business requirements and we'll undertake a technical assessment and provide you with recommendations for your organisation.
