

Project success story

# End-to-End Cloud Migration

## Industry

Government administration

## Employee

501 - 1,000

This Government organisation was looking to migrate approximately 100 DNS zones from a legacy on-premises hosting platform into the Microsoft public cloud DNS offering.

## Challenges

- ✓ The organisation was leveraging basic and outdated DNS migration tools which was limiting to customers moving to Azure
- ✓ Azure did not support a fast restoration of a DNS zone

## Benefits

- ✓ The same level of availability and redundancy was maintained by the new solution as was configured in the legacy environment saving time in setup and unnecessary re-configuration
- ✓ Adoption of new DNS tools improved the Azure cloud migration process

## Solutions

- ✓ Smooth migration to Microsoft Azure with no end-user impact
- ✓ Adapted open-source DNS libraries into a set of PowerShell migration and management scripts
- ✓ Handled the liaison with Azure technical support in order to find resolutions
- ✓ Scripted backup and recovery procedures were developed
- ✓ Non-public Azure configuration was organised via the Azure engineering team
